Identity and directory sync

One page pulled from the Canon rooms named in the source column. Open the room before you quote a number in a design. This is not a copy of a Cisco document.

Check	What the room says	Source
What is Directory Connector?	Windows software from Control Hub that synchronizes one Active Directory domain into the Webex organization. [cite:1]	T1-R02-identity-directory-sync.html
Why does a dry run exist?	The guide says you must do a dry run before a full synchronization. [cite:1]	T1-R02-identity-directory-sync.html
What breaks if SSO is skipped and invites are suppressed?	Invite suppression requires the SSO integration, so the suppression step is not available as a standalone switch. [cite:1]	T1-R02-identity-directory-sync.html
How does an organization SSO assertion name the user?	The IdP claim includes the uid attribute, and NameID format is transient. [cite:2]	T1-R02-identity-directory-sync.html
How does partner SSO differ?	The claim is mail, rather than uid. [cite:2]	T1-R02-identity-directory-sync.html
Which SCIM generation synchronizes groups and still skips rooms?	SCIM 2.0. Rooms and avatars are Wizard-only, through Microsoft Graph. [cite:3]	T1-R02-identity-directory-sync.html
How long is the manual SCIM bearer token valid?	365 days. [cite:3]	T1-R02-identity-directory-sync.html
